Now bars to reach a staggering app released since mid-October, and in a variety of models, including cheaper, 4G-only types, the new iPhone looks set to be one of the most popular phones of the year. Well, now, thanks to a brand new iPhone 12 video, which shows off the new iPhone range in a variety of designs, we just have our brightest look yet on how specific apple's new input phone can be. Cyber Monday Deals: See all the best offers right now! The video here comes courtesy of youtube channel ConceptsiPhone and shows a series of iPhone 12 concept designs. Some of these are based on leaks and rumors about the new iPhone, while others have more futuristic imagination of what the new iPhone can look like, and its features can boast. These designs make us quite hippie for a new iPhone like never before. So, while the official iPhone 12 remains shrouded in secrecy at the moment, many of the designs shown here are rarely accurate to what leaked dummy models from the iPhone 12 range resemble, and much has already been leaked about the new iPhone that its design is well considered by many. In fact, we've even already confirmed what special versions of the iPhone 12 will look like, like this crazy expensive iPhone 12 Pro SpaceX Edition.As to what the iPhone 12 is supposed to come up with in terms of hardware, the big upgrade driver predicted this year is 5G approval in many ranges, although the phone is also set to come with an incredibly powerful new processor and The boat will come from the features of the new advanced software. Here on T3 we are disappointed to miss our iPhone 12 and, naturally, will be checking the family of phones as soon as we can. Check in soon for an even brighter iPhone 12 image. Today's best Apple AirPods Pro DealsCyber Monday sales ends inCheck of more Cyber Monday sales deals from these top retailers:Friday's best phonesBlack deals Facebook is the most popular photo-sharing service on the web so it's no surprise that they released an app dedicated to the photo aspect of Facebook - it's called Facebook Camera. With the Facebook camera, you can easily share multiple photos to Facebook, add filters to them, tag your friends, and view a feed news feed limited only to photos posted by you and your friends. And of course you can also leave comments and like photos. The The Facebook camera screen is a news feed, except that this news feed only includes photos, status updates and like links on Facebook for iPhone. You can sort the stream to show photos sent by your friends or just your own photos. The appearance of the photos in the stream resembles the new look that has just been implemented on Facebook for the iPhone. The photos are all wide and wider than the white background. Each photo is also cropped as a square. At the bottom of each photo you'll see a thumb button to like, a comments button to leave comments, and the number of likes and comments will also be displayed. Once you tap on the numbers, popup will appear to show who liked the photo as well as all the comments. You can also leave a comment. This button is actually exactly what is spoken as the bubble button. Tapping on the photo will display it on a black background with the title at the bottom as well as buttons to like, comment, and tag. At the top of the feed, you'll see a strip of photos from the roll camera and a button to launch the camera. Sliding down in the news feed slides it from the screen so you can scroll through all the photos on your camera roll. Tapping a photo will make it bigger and allows you to add product, label, or filter to it. These filters look remarkably similar to Instagram filters, but are supposed to be expected since Facebook recently bought Instagram. Once you've edited the photo to your liking, you can select or share it with the Mark button. If you choose it, it will be taken back to your roll camera photos network to replicate the process with more photos. When you're ready to share photos, just tap the share button. This screen looks similar to the photo sharing screen on Facebook for the iPhone. It displays small images of all your chosen photos, let you say something about them, add a location, add friends, and set privacy settings. Nice beautifully designed news feed view or your friends photos or just upload your multiple photos at once editing photos with a sling and adding filter label friends set privacy settings before posting leave comments and likes in bad speech bubble photos and comments/ Like counting buttons do exactly what my bottom line should say that I'm rather surprised with how much I like this app. I've done nothing but complain about Facebook for the iPhone, but Facebook seems to have done an outstanding job with the Facebook camera. It's not an Instagram replacement, but it's added as much as Facebook. Now I'm just curious to see how long before these filters became available in the Web version of Facebook. Free - Download Now we may earn a commission to purchase using our links. learn more. A new Facebook service for the iPhone has been announced at the SXSW Interactive Conference held in Austin, Texas. The service we're talking about is Facebook Connect, which allows you to link yourself Applications to your Facebook profile, in order to share data with friends. Thanks to the new service, users will be able to play not only with other iPhone users, but also with those on the COMPUTER, for example. Sharing your scores on your Facebook feed is also as easy as pie. In addition, you will be able to see if your friends are online, as well as invite them to join the game. Companies that are expected to develop Facebook connected apps include Citysearch, EA Sports and MTV.source:PCMagazine shared our newsletter! Facebook Inc. says the privacy changes that Apple Inc. has made to its newest operating system have crippled the social media giant's ability to serve targeted ads to iPhone users while they use outside apps. The announcement sharpens the conflict between the two tech giants. Apple is standing up for user privacy while Facebook defends the free flow of data that has long grounded digital marketing. Facebook on Wednesday released a memo to app developers saying Apple's changes will affect its audience network business. The business connects users' Facebook identities with activities outside its platform, enabling the company to serve ads on outside apps—enriching its data collection with information collected elsewhere and allowing Facebook to refine its behavioral targeting. The changes come into force with Apple's new operating system for the iPhone, called iOS14, which was released in beta form to developers in June. Under Apple's new law, Facebook and other firms that facilitate online advertising will no longer be allowed to collect Apple ID for advertisers, or IDFA, without the user's permission. This 32-character string of letters and numbers is the user's original nickname in 'anonymized' files, maintained by the digital-ad industry and data broker. Companies large and small use it to match data sets about where users go, what they have bought and what apps they use. Apple did not immediately respond to a request for comment. Facebook does not disclose the size of the audience network business, though it is believed to represent a slice of Facebook's nearly \$70 billion digital ad empire. Before the Covid-19 pandemic struck, technology ad consulting firm Jounce Media predicted Facebook would bring network audiences at \$3.4 billion in 2020. However the company expects the impact of Apple's new consent requirements will be significant enough that the company acknowledged IDFA's changes in its July 30 earnings call. Companies that use Facebook's ad technology to sell ads on their apps, from game makers to news publishers, could have been affected by Apple's change. Facebook said in the initial experiment that when personalization was removed from advertising, it saw a 50 percent decline in publisher revenue. Apple, which produces world-class devices, has criticized data collection operations that underly Facebook's massive advertising business Meanwhile Facebook has faulted Apple for its platform's exclusionary nature and for operating Centers in countries without strong protection for users. Apple Chief Executive Tim Cook has made privacy one of the company's top priorities in recent years, running ads based on his intention to protect user data and refusing to comply with some law enforcement requests to unlock iPhones for high-profile research. Mr Cook is even looking to turn a principle backed by his predecessor, Steve Jobs - that our customers are not our product, to a business strategy. The company has gradually been aiming to raise customer awareness of the value of privacy with features such as the logging option on apps that hide personal information and browser updates that show how sites track users. Our vision of privacy of our values began, then we produced a business plan out of it. Mr. Cook said during a Fortune conference in 2018, arguing that the company is restricting access to its platform to limit competition on its platform in self-catering modes, however. Facebook joined those protesting Apple's 30 percent drop in in-app deals earlier this month, saying in a product release that it requested an exemption but was rejected. Facebook presented this at the time as a benefit to small businesses that struggled during the pandemic. In preparation for the new iPhone operating system, the digital ad industry is not harnessing for many users to choose the app's request option for tracking. That's a key link that Facebook and Alphabet Inc. owned by Google use to support their massive digital advertising business – not to mention a host of small companies that are even more reliant on it. In a survey by milk research firm, 85% of respondents said that if they saw this message in their favorite app, they'd choose not to request the app to track. Despite its efforts to adapt to future changes, Facebook said Wednesday that they may make the audience network so ineffective on iOS14 that it might make no sense to offer it on iOS14 in the future. Facebook said the changes are likely to lead to a drop in revenue for developers at an already difficult time for businesses, adding that it considers the situation still murky due to a lack of guidance from Apple. If Facebook loses the ability to collect user-level data from iOS apps, it will take a serious hit to the process of enriching its user profile, says digital ad consultant Erteko Vidakovich, if the advertising effectiveness suffers, it will limit the scale of the ad spent on Facebook in the future and thus limit Facebook's growth. Facebook said the audience network will continue to operate on Apple devices using previous operating systems and devices made by other manufacturers. Makers.
